NAME:
NEPTUN:

First Solution:
Second Solution:

1. A company's cash position, measured in millions of dollars, follows a generalized Wiener process with a drift rate of 5 per year and a variance rate of 8 per year. The current position is 50. What is the expected value, and the standard deviation of the cash position after two years?

a) EV = 60; STD = 4
b) EV = 60; STD = 16
c) EV = 10; STD = 16
d) EV = 10; STD = 4

2. N(x) is the standard normal distribution function. Calculate N(0,129) if we know N(-0,129) = 0,449.

a) N(0,129) = 0,551
b) N(0,129) = -0,551
c) N(0,129) = -0,449
d) N(0,129) = 1,449
